The Falcon 8X Archange to serve the French Air Force

Saint-Cloud, 14 January 2020 – On 30 December 2019 the French Defense Procurement Agency (DGA) ordered the Archange airborne strategic intelligence program, comprising three Dassault Aviation Falcon 8X aircraft equipped with the Thales new-generation payload CUGE (universal electronic warfare capability). A contract has been awarded for the first two aircraft.

Dassault Aviation and the dozens of French companies associated with the Falcon programs wish to thank the Ministry of the Armed Forces, the DGA and the French Air Force for their confidence.

The required level of performance of the Archange Falcons necessitates highly complex integration work, something that is at the core of Dassault Aviation and Thales know-how.

"I am very proud and happy with the decision of the Ministry of the Armed Forces. The Archange Falcon will serve the French forces in the same way as the Falcons 10, 200, 50, 2000, 900 and 7X are already doing it, declared Eric Trappier, Chairman and CEO of Dassault Aviation. The special mission Falcons provide the perfect illustration of the dual competences of Dassault Aviation: our civil aircraft benefit from the cutting-edge technologies developed for our combat aircraft, which in return benefit from the industrial processes deployed for the highly competitive production of the Falcon aircraft."

The tri-jet Falcon 8X is the latest addition to the Falcon range. The business jet version can carry 8 passengers and 3 crew members over a distance of 6,450 nm (12,000 km). It has digital flight controls which stem directly from Dassault Aviation's experience acquired with the Mirage 2000 and Rafale. It is equipped with an EASY digital flight deck and the totally unrivalled FalconEye combined vision system (CVS).

Exported to more than 90 countries, the Falcon aircraft are flexible and economic to fly. Their handling qualities, aerodynamics and versatility render them capable of fulfilling missions that go beyond civil aviation standards. They are designed by the design office that also develops the Rafale and nEUROn combat aircraft. Over the last 50 years, Dassault Aviation has customized many Falcons for purposes such as medical evacuation, cargo transport, maritime surveillance, electronic warfare, etc. These multirole aircraft represent about 10% of the Falcon fleet in service across the world.
